

Mitigate Quantum Risk Using CBOM and QBOM

Chronos supports organizations in achieving quantum readiness through visibility into cryptographic assets, CBOM and QBOM mapping, and assessment of quantum and cryptographic risk aligned with NIST direction.

Achieve Quantum Readiness Achieve Greater Heights

- Quantum Discovery & Risk Visibility (Powered by Chronos)**
- Board-Level Quantum Awareness & Executive Training**
- Quantum Workshops for IT, Security & Risk Teams**
- Quantum-Ready Roadmap for Your Organization**
- Vendor & Third-Party Quantum Risk Management**

About Company

mPHATEK Systems is a global cybersecurity and IT consulting company helping enterprises secure critical systems, manage cryptographic risk, and prepare for emerging threats. With deep expertise in security operations, architecture, and post-quantum readiness, we support organizations across their journey from discovery to long-term resilience.

**STRENGTHENING
BUSINESS
CONTINUITY
AGAINST
QUANTUM THREATS**

Chronos Two Phase Approach

1 Cryptographic Discovery

2 Post-Quantum Cryptography (PQC) Enablement

**Achieve Quantum Readiness
Achieve Greater Heights**

Discovery Capabilities

Identify cryptographic assets
and exposure

Discovery Through Two Focused Scans

Network Scan

Identify cryptographic traffic and
detect outdated or
unsupported protocols across
your network

Application Scan

Highlight custom cryptography
and cryptographic libraries used
within your applications.

PQC Capabilities

Enable quantum-safe cryptography
and readiness

- PQC implementation on servers.
- Secure internet traffic with PQC.
- Quantum-resistant algorithms for encryption.
- TLS/SSL integration with PQC.
- Backward compatibility during PQC transition.
- Expand PQC to internal systems.
- Monitor and update for quantum threats.

Key Features of Discovery

- Scan the environment and identify where cryptography has been used.
- Simplified reporting with detailed information on encryption usage.
- Option to scan in bulk or individually, based on needs.
- No need to share credentials with third-party organizations; perform scans within your own environment.
- Comprehensive dashboard providing in-depth insights.
